

# SOL-Secure, an anti-wandering system for residents of retirement homes, nursing homes, long-term care facilities, and psychiatric wards

Secure

Enhances the well-being of senior citizens

### Ensures security and safety without obvious tracking

- A solution that is non-invasive and comfortable (no bracelet or pendant).
- A solution that is ethical and respects personal privacy (detection is solely at the facility's entrance and exit points).
- A solution that is reliable and autonomous (no battery).
- A solution that is durable (designed to withstand washing machine cycles).

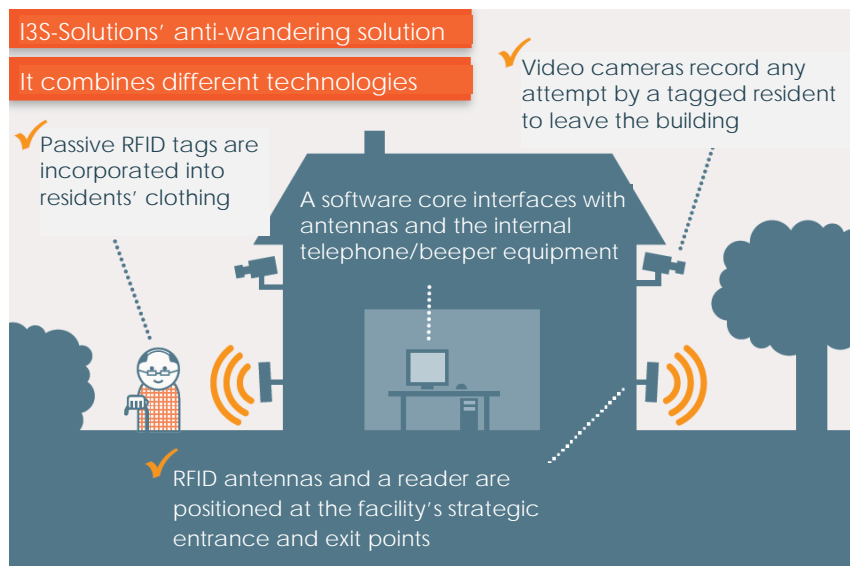

Ethical

### Reinforces the security and safety of retirement and nursing home residents and respects their well-being.

- **Sol-Secure** is an anti-wandering system for residents of retirement homes, nursing homes, and long-term care facilities.
- Designed and developed by **I3S-Solutions**, **Sol-Secure** incorporates two technologies: RFID (Radio-Frequency IDentification) and Video
- RFID tags are sewn or fused onto the inside of residents' clothing.
- The anti-wandering system detects any unplanned exit from the building, setting off beeper and video alerts.

Flexible

### How the Sol-Secure anti-wandering system works?

## The 3 advantages of the SOL-Secure anti-wandering system

### ① Competitiveness

- A financially attractive solution for facilities accommodating more than 50 residents.
- A selling point that reassures families of new residents
- A solution that creates value for the care facility, representing a non-negligible “plus”

### ② Personal Freedom

- **Autonomy:** Residents can move around freely and therefore can maintain a normal life.
- **Ethics:** Residents' security and safety are ensured while respecting personal privacy (no bracelet).

### ③ Flexibility

Installation and use of the anti-wandering system can be tailored to the needs and budget of the facility.

A system with multiple functionalities:

- **Adaptability to the building's structure** and to the number of entrances and exits.
- **Access control** even within specific areas of the building.
- **Capability to trace** residents' clothing.

## Example of an anti-wandering system in place
